Clubmaker Dual Tape Dispensor

Stock #245235

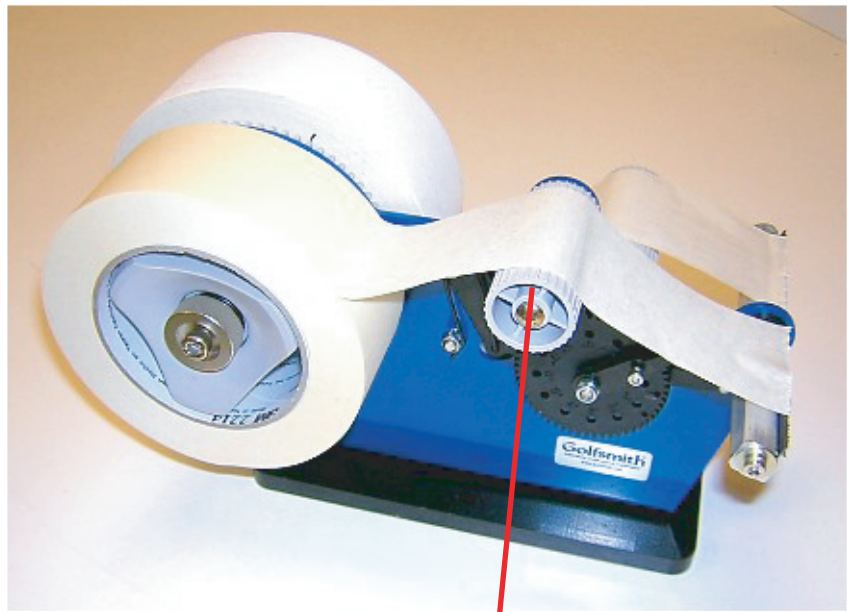

INTRODUCTION

The Clubmaker Dual Tape Dispensor is capable of handling one 2" roll of double-sided grip tape in addition to a 2" wide roll of masking tape for grip build-up. This is a heavy duty dispensor capable of large volume gripping installation and is also well suited for the hobbist clubmaker. The double-sided dispensor can be operated using a pre-designated dispensing feed for exact tape lengths on a repeated basis. The Clubmaker Dual Tape Dispensor operates with its own base stand however it can be permanently mounted to any work surface by removing the base and running bolts through the dispensor's bottom into the desired location.

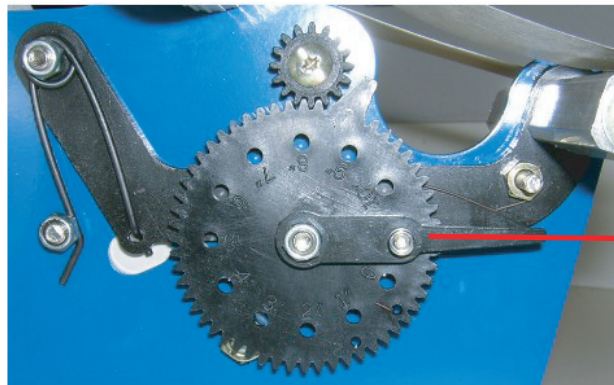

Double-sided tape should be fed over the top roller. The gears will collect the tape backing at the same rate as the double-sided tape is fed from its roll.

Tear tape by pressing down on the cutter. This resets the length dispensing gear.

Feed tape backing onto the take-up roller from its underside.

Feed the build-up tape over the top roller for smooth dispensing.

Set the lever pin of the dispensing gear to the desired number of inches of tape feed. This will permit only the selected length of tape to be dispensed on each pull.
